

Left Tank is Full when the bullet is in the middle

Right tank is Full when bullet is at bottom

Both empty when bullet is at top.

---

Jim will fill Chlorine tank by he goes. - You wait have to deal with that.

---

IF pressure gets above 65, means switch has malfunctioned - Means tanks are full + you need to turn off pump - Pressure should go back to 60 in a few hours.

---

Wendy

Probably best to turn #3 on by selecting "hand" - means it will pump till you shut it off

---

Come in am to check fullness + pressure +

if its pumping

IF there's over half in

both tanks you're OK till next 12 hour period.

---

IF there almost full in pm, can shut off overnight

---

IF half full in pm, leave pump on overnight + check in am.
